Table of Specifications of the Meitzav Examination: Eighth Grade

May 2009

* Categories of Comprehension

Lower Order Thinking Skills (LOTS)

Literal Comprehension: Literal comprehension refers to an understanding of the explicit meaning of a text. Questions that require literal comprehension include items that can be answered directly from the text at the sentence level. They can be questions that require either copying or rephrasing of information from the text.

Higher-Order Thinking Skills (HOTS)

Integration: Integration refers to an understanding of the explicit meaning of a text but also requires accessing information from various parts of the text in order to answer a given question. Questions that require integration include items that require thinking about how ideas or information in the passage relate to each other as well as to an understanding of its main idea and supporting details.

Inference: Inference refers to an understanding of the implicit meaning of a text. Questions that require inference include items that involve combining the pupils' literal understanding of the text with their own knowledge and experiences in order to produce a response that is not explicitly stated in the text. It also entails questions that require identification of a specific text type.
